DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 06/30/2006 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-2 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The second R8 choice is unclear. An amidoxime is a general class of molecules with the Formula $R-C(NH_2)NOH$. As a molecule, it has no valence, and it cannot be a substituent. Further, even as a moiety, it is unclear how it is to be attached. If attached via the O, it would be an oxime ether, but attached via the N it would be an amino substituent. It could be attached via removal of H from the R group, to give $-R-C(NH_2)NOH$. In all three cases, it is unclear what R is intended to be. The 4th possibility would be to remove the R itself to give the $-C(NH_2)NOH$ group. For whichever choice is selected applicants must show that one of ordinary skill in the art would have been able to figure that one out.

Art Unit: 1624

Claim Objections

Claims 3-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
